

Preview Construction Inc., James Hardie and Dupont Tyvek "Re-Side It Right" Partners

The quick way isn't always the best way.

Covering up old siding might be the quickest way to put new siding on your home, but in reality you could be covering up the problem, not solving it. The best way to deal with old rotten wood or Masonite, is to start with a clean slate and remove it.

- ❑ **Preview Construction Inc.** will completely remove all old siding down to the studs, removing the original problem.

- ❑ Our installers are trained to inspect for any potential problems before they install new siding. That includes any damage to studs caused by insects or wood rot caused by water penetration.
- ❑ We will also inspect your current insulation's condition and R-Value.
- ❑ We will then bring any problems to your attention, and help you make a decision on how to proceed.

- ❑ We then completely wrap your walls with **Tyvek HomeWrap**. This amazing product keeps water and air out, yet is engineered to readily allow moisture vapor to diffuse to the outside.
- ❑ **Tyvek Homewrap** works with your insulation to maintain R-value.

- ❑ Each piece of **James Hardie** siding is installed using **James Hardie** approved procedures and tools.
- ❑ Siding is cut with a Diamond HardiBlade, and attached with a approved siding nail gun.
- ❑ We then prep, caulk and paint with **James Hardie** approved products.
